### **DETAILED ACTION**

1. Claims 1-26 are pending and examined.

#### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 11-26 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a method of forming a reversible peptide-receptor complex, does not reasonably provide enablement for various physiological effects the complex has on the cell expressing the receptor. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims. Applicants have not shown any data correlating the complex formation and the physiological effects of the cell, such as stimulation of signal transduction (Claim 11), secretion of hormones (Claim 12), modulation of neural development and/or utilization in a mammal (Claim 13), modulation of contractility in gastrointestinal cells (Claim 14), modulation of nutrient uptake in gastrointestinal cells (Claim 15), modulation of growth hormone secretion in pituitary cells (Claim 16), secretion of digestive enzymes (Claim 17), modulation of the secretion of digestive hormones (Claim 18), modulation of secretion of enzymes in pancreas cells (Claim 19), modulation of the secretion of hormones in pancreas cells (Claim 20), and etc. (Claims 21-26).
